

REPUBLIC OF KENYA

MINISTRY OF HEALTH

# Silencing TB starts with you.

Tuberculosis (TB) can be treated and cured. There are improved medicines that are easy to give to your child and easy for them to take.

If your child is in contact with someone who has a cough—at home, in school, or anywhere else—get them tested for TB immediately.

## WHAT TO LOOK FOR:

A cough

Loss of weight

Fever or night sweats

Reduced playfulness or irritability

If your child has any of these symptoms, or has been near someone who has TB or a persistent cough, they may have TB.

If anyone is showing the signs of TB, get your child tested today. The test is available and is free!
